

## Pt - cored Ni-Ti wire

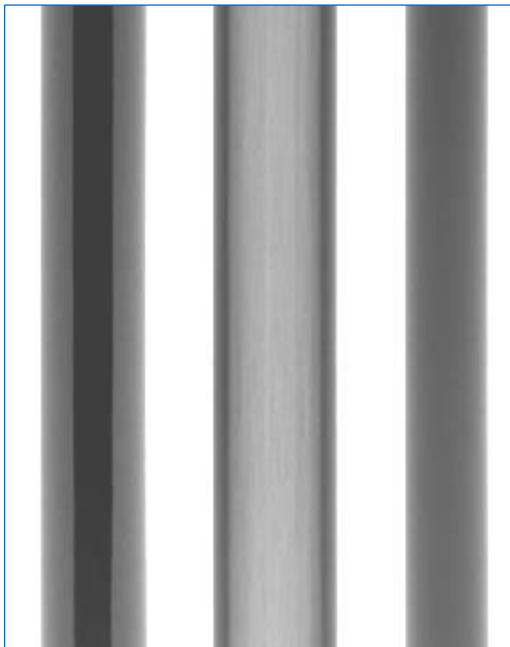

Furukawa Techno Material  
2E-GISI-02-34\_Rev.3

Furukawa developed a Pt-Cored Ni-Ti wire for high visibility under the x-ray observation.

Ni-Ti alloy with a Platinum core made the wire with high radiopacity clearly visible under the x-ray without spoiling its super-elasticity. The wire is available in 0.05~1.0mm diameter with a core area ratio of 10~20%.
